Walter Surface Technologies Inc.  
[FSabri@walter.com](mailto:FSabri@walter.com)

Dear Faezeh Sabri,

**RE: 70% alcohol surface disinfectant (DIN 02517426)**

This is in reference to your e-mail of September 8, 2021, wherein you provided the additional information on the subject product for use as a food contact surfaces cleaner/disinfectant in food processing establishments.

Based on the information submitted, we can advise that we see no reason to object to the composition and use of the subject product, as proposed, in food processing establishments, provided that:

- a) there will be no contamination of food as a result of its use and storage;
- b) surfaces subject to direct contact with food are thoroughly rinsed with potable water after treatment with the product to remove any chemical residues resulting from its use, as stated on the label;
- c) this is used under well-ventilated conditions in the plant where there will be no accumulation of solvent vapour in food processing areas;
- d) prior to application (spraying) of the product in food handling areas, all food should either be removed from the vicinity or otherwise protected from the spray; and
- e) the use of the product will not leave any residual fragrance on food contact surfaces and will not mask odours resulting from unsanitary conditions when used in food handling areas.

Please note that that our opinion above relating to the use of this product in food processing establishments has a *food safety focus* only. It is the company's responsibility to ensure that this product complies with all legal requirements, which are relevant to its use.

We trust that the foregoing will be of use to you.

Yours truly,

X
