

Electrochemical Weld Cleaning System for Stainless Steel

The SURFOX electrochemical weld cleaning system is a highly effective method of removing heat tint from welded stainless steel (TIG, spot, and pulsed MIG), without altering the surface of the parent material. SURFOX promotes the formation of a uniform and durable chromium oxide passive layer to protect stainless steel against further corrosion.

SURFOX is safer, faster, and a more cost effective alternative to very hazardous pickling pastes and other weld cleaning processes.

SAFE SURFOX cleaning electrolytes are NSF registered to be used in food plants and pose no health hazards for operators.

FAST Uniform cleaning and passivation at a rate of 3 to 5 feet per minute.

EASY TO USE The integrated reservoir and dispensing pump automatically delivers the cleaning electrolyte to the tip of the SURFOX machine to ensure no interruption in the cleaning process.
